SUMMARY

Computer Science undergraduate with a strong foundation in full stack, data structures and software design with open-source experience. Backed by specialized training in Artificial Intelligence, Machine Learning and data analytics, with a proven ability to collaborate effectively in technical environments.

EXPERIENCE

Open Source Contributor — GirlScript Summer of Code

May 2026 – Present · Remote

- Fixed data visualization date rendering and heatmap logic in production-level open-source codebases
- Optimized interactive web elements, including slider inputs, password generator responsiveness, and authentication form components.
- Resolved UI overflow, theme state persistence, and responsive layout overlaps across multiple community repositories.
- Collaborated with project maintainers via Git/GitHub to review, test, and merge pull requests covering intermediate and advanced feature refactoring.

Web Development and Projects Member — CodeChef VIT-Chennai Chapter

May 2026 – Present

- Spearheaded audio design for a 3D computer-vision-powered horror game in Unity, utilizing Audacity to source, edit, and mix atmospheric soundscapes.
- Engineered a JWT-based authentication module for the Blackbox web event that securely aggregated and verified progression keys from four preceding stages.

EDUCATION

Vellore Institute of Technology

July 2024 – Present · 8.85 CGPA

B.Tech, Computer Science Engineering

Relevant coursework: Foundations of Data Science, Operating Systems, Algorithm

PROJECTS

FIFA World Cup 2026 Predictor

Machine Learning, Python, XGBoost

A machine learning project using historical match data, FIFA rankings, and squad market values to predict the winner and simulate the knockout stages of the 2026 FIFA World Cup.

- Monte Carlo Simulation Logic

Disaster Warning Dashboard

HTML, JavaScript, CSS, OpenMeteo API

A real-time web application aggregating meteorological and emergency data to monitor floods, cyclones, and earthquakes across India.

- Real-time monitoring

Debt Optimizer

TypeScript, FireBase

Interactive personal finance tool that streamlines debt payoff by automating interest calculations, tracking monthly schedules, and generating clear financial roadmaps.

- Predictive payoff simulation
- Snowball and Avalance Method

Marketing Funnel & Conversion Performance Analysis

Data Science, Tableau, Pandas

A comprehensive marketing funnel analysis and conversion performance tracking toolkit with data visualisation and actionable insights.

- Market Funneling
- Cross-filtering

Customer Retention & Churn Analysis

Data Science, Power BI, Pandas

Built an interactive Power BI retention dashboard using Python-cleaned telecommunications data to analyze churn behaviour and empower product and growth teams with strategic insights.

- Data Cleaning & Visualization

SKILLS

Languages: Python, C++, Java, JavaScript, TypeScript, SQL, R · Expert

Frameworks: React, Next.js, Node.js, Express, Vue.js · Expert

Tools & Platforms: MySQL, Visual Studio Code, AWS, Git, Power BI, Tableau · Expert

CERTIFICATIONS

Associate Data Practitioner Certification

Google · August 2026

GEN AI Using IBM Watsonx

IBM · June 2025
